

FROM THE ARCHIVE

Dear Customer

We have had one or two instances recently from customers who have Naylor TF 1700s fitted with chrome wire wheels where a lack of attention to the chrome has caused slight rusting. Because of that we are now issuing the attached letter in the Operation Manual with each car sold with chrome wire wheels. Naturally at this time of year all chrome wheels fitted to our cars are being treated with a protective coating of 'waxoyl' prior to leaving the factory.

The letter is self-explanatory, and because you also purchased a Naylor with chrome wire wheels, we would like to draw your attention to the topics covered with regard to cleaning and protection.

We trust you are continuing to enjoy driving and owning your Naylor, and would like to take this opportunity of wishing you a very Happy Christmas and Prosperous New Year.

Yours sincerely

A handwritten signature in black ink, appearing to read "Rod Basnett". The signature is stylized and somewhat cursive, with a large initial "R" and "B".

IMPORTANCE NOTICE

Dear Customer

The chrome wire wheels fitted to your car are manufactured from components chrome plated to the highest automotive standards. However, like any chrome plated fittings, they are most vulnerable to deterioration arising from exposure to road dirt and particularly salt. This is exacerbated by constant 'stress' movement of the spoke joints in the rim during normal use.

It is, therefore, imperative that the wheels (including the spokes) are thoroughly cleaned regularly and protected in adverse conditions by a liberal coating of a good quality wax particularly in the spoke joints.

By taking this care you can expect the aesthetic appeal of the wheels to be maintained during many years of enjoyable motoring.

For your further information, the actual manufacturer's quote is:

"KEEP THE WHEEL CLEAN AND SPRAY WAXED. DO NOT USE ANY STRONG TYPES OF CLEANING SOLUTION, DETERGENTS, ETC."
